AZARIUSH HUSSAIN

Software Engineer — Backend Developer — Full Stack Developer

+91 6299242612 — Bangalore, India

azariushhussain@gmail.com — linkedin.com/in/azariush-hussain — github.com/AzariushHussain

PROFESSIONAL SUMMARY

Software Engineer with nearly 2 years of combined experience developing scalable backend services, REST APIs, full-stack applications, and AI-powered solutions.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, SQL
Backend: Django, FastAPI, REST APIs, Object-Oriented Programming
Frontend and Mobile: React.js, React Native, Redux, HTML5, CSS3
Databases and Caching: MySQL, PostgreSQL, Redis
Cloud and Infrastructure: AWS (Lambda, SQS, EC2, S3), Docker
AI/ML: OpenAI APIs, LLaMA, LangChain, RAG, Pinecone, ChromaDB
Additional: WebSockets, Redis Pub/Sub, Third-Party API Integration, Git, Agile

EXPERIENCE

Associate Software Engineer, Lyfverse Technologies, Bangalore, India
Aug 2025 – Jul 2026

- Managed end-to-end release delivery and code management across 2 mobile apps and 4 websites, including version control workflows, branching strategy, code reviews, and deployment pipelines.
- Integrated 4 payment gateways — Razorpay, Cashfree, Dodo, and Stripe — enabling secure, multi-provider transaction processing across applications.
- Engineered an in-house image compression and storage pipeline, replacing Cloudflare's paid image transformation service and reducing image-processing costs by 100% (from $8/day to $0), saving an estimated $2,900+ annually.
- Developed an AI-powered note-taking feature using Retrieval-Augmented Generation (RAG) to generate actionable insights and suggestions for monthly student reports.
- Engineered efficient SQL query structures and database workflows (indexing, query optimization, schema design) alongside Redis-based caching for real-time data and Cloudflare HTML/page-level caching, reducing average API response latency and database load on a high-traffic production platform (discover.lyfskills.com), contributing to a 95+ average Core Web Vitals score across all pages.
- **Key Technologies:** React.js, React Native, FastAPI, Redis, MySQL, AWS

Full Stack Developer Intern, Friggly.ai, Bangalore, India
Dec 2024 – Jan 2025

- Constructed a real-time analysis system using Django and Flutter, handling facial and voice-based biometrics.
- Integrated multiple BTBP APIs for facial feature analysis.
- Streamlined REST API performance by optimizing request-response cycles and latency.
- Leveraged MediaPipe to extract facial and voice landmarks, and developed custom algorithms to compute features like ratios, angles, pitch, formants, and HNR.
- Translated raw landmark data into interpretive scores for masculinity, confidence, tone, and more.
- **Key Technologies:** Django, Flutter, MediaPipe, REST APIs, BTBP API Integration, Redis, Facial Landmark Analysis, Voice Signal Processing, Feature Engineering

Backend Developer Intern, Vibtree – Sobot & OneInbox, Bangalore, India
Feb 2024 – Jul 2024

- Engineered and integrated external communication API services using Django and OOP principles, boosting engagement metrics by 50%.

- Refactored database queries and restructured API architecture, decreasing response times by 30% .
- Implemented and deployed serverless AWS Lambda functions with SQS triggers to accelerate asynchronous workflows.
- Built a RAG-based support assistant (OneInbox) with LLaMA 2 and LangChain for generating real-time call transcripts and summaries.
- Crafted custom Node-RED nodes, enabling users to create flow-based, event-driven operations visually.
- **Key Technologies:** Django, Python, Node-RED, RESTful API Development, PostgreSQL, AWS Lambda, AWS SQS, API Integration, LLaMA 2, LangChain, RAG Architecture, Vector DBs

PROJECTS

QuickChat – Scalable Real-time Messaging Platform GitHub Link

- Architected a real-time messaging backend using Redis Pub/Sub and WebSockets for scalable live communication.
- Established secure OTP login flows with Twilio and JWTs for session control.
- Modularized backend logic for better maintainability and service isolation.
- Orchestrated real-time client communication with Redux and React.
- **Key Technologies:** Node.js, Express.js, Redis, WebSockets, Pub/Sub Architecture, MongoDB, React.js

WebRTC Video Conferencing Application GitHub Link

- Engineered a group video calling platform using SFU for efficient stream routing.
- Built secure, room-based access control with encrypted WebRTC peer connections to ensure privacy and confidentiality.
- Enabled captioning, timeline tracking, and meeting summaries to enhance accessibility and insights.
- **Key Technologies:** MongoDB, Express.js, React.js, Node.js, WebRTC, SFU Architecture, Socket.IO

EDUCATION

Bachelor of Science (BSC-Computer Science), Bangalore University, Bangalore, India
July 2022 - July 2025

CERTIFICATIONS

- **JavaScript** – *HackerRank* *Certificate*
- **Python** – *HackerRank* *Certificate*
- **SQL (Advanced) Certificate** – *HackerRank* *Certificate*
- **NGINX** – *LinkedIn* *Certificate*
- **Backend Developer Internship** – *Vibtree, Feb 2024 – Jul 2024* *Certificate*
- **Full Stack Developer Internship** – *Friggly.ai, Dec 2024 – Jan 2025* *Certificate*

ADDITIONAL ACTIVITIES

- **Problem Solving:** Enjoy solving algorithmic challenges and regularly participate in LeetCode contests. Maintained a 450+ days problem-solving streak. *LeetCode Profile*
